

Safety shut-off valves JSAV

TECHNICAL INFORMATION

- For positive pressure with over-pressure shut-off
- DN 25, DN 40: with under-pressure shut-off
- Large adjusting range for trip pressure
- DN 25, DN 40: no breather line required
- EU certified

1 Application

JSAV 25

JSAV 40

JSAV 50 – 100

Controls which are connected downstream of a gas pressure regulator are secured against excess gas pressure. If the required operating conditions are not met, the gas supply is shut off.

A safety shut-off valve is required in accordance with EN 746-2 for all gas pressure control systems in which the controls downstream of the gas pressure regulator are not resistant to the supply pressure.

1.1 Application examples

The JSAV protects all controls downstream of the gas pressure regulator in the gas inlet section.

2 Certification

Certificates – see www.docuthek.com

EU certified

- (EU) 2016/426 (GAR) – Gas Appliances Regulation
- Pressure Equipment Directive (2014/68/EU), Class A
JSAV 25 – 40 with over-pressure/under-pressure shut-off
- Pressure Equipment Directive (2014/68/EU), Class B
JSAV 25 – 40 with over-pressure shut-off
JSAV 50 – 100 with over-pressure shut-off
- DIN EN 14382:2009

Eurasian Customs Union

The products JSAV meet the technical specifications of the Eurasian Customs Union.

3 Function

3.1 JSAV 25 – 40

The upper trip pressure is set using the outer setpoint spring in the measuring unit. The lower trip pressure is set using the inner spring in the measuring unit. The JSAV measures the pressure downstream of the gas pressure regulator via an external impulse line.

The JSAV closes once the set trip pressure has been reached. The valve disc is pressed onto the valve seat and thus shuts off the gas supply safely.

The position of the valve disc can be seen through the transparent reset cap.

The JSAV is manually reset. To do so, the pressure in the impulse line must be between the upper and lower trip pressure.

First, unscrew and remove the breather screw plug. Then loosen the reset cap. By pulling the reset cap slightly, the pressure is equalized via an internal hole in the valve disc. Once pressure equalization is complete, the reset cap can be lifted easily and the valve disc is engaged in the open position.

A relief line is not required on the measuring unit because a maximum of 30 l/h can escape via the hole in the breather screw plug.

3.2 JSAV 50 – 100

The trip pressure is set using the setpoint spring in the measuring unit. The JSAV measures the pressure down-

stream of the gas pressure regulator via an external impulse line.

The JSAV closes once the set trip pressure has been reached. The valve disc is pressed onto the valve seat and thus shuts off the gas supply safely.

The device can simply be manually reset. The pressure in the impulse line must be distinctly below the trip pressure.

To begin with, a pressure equalization is carried out via the integrated venting valve in the valve disc using the supplied reset lever. Afterwards, the valve disc is fully opened and finally engages.

A breather line must be connected to the measuring unit to ensure that the closing function is activated as soon as the trip pressure is exceeded. A visual position indicator to show the current position of the device can be implemented by means of an electric switch as an option, see page 12 (Position switch for remote indication).

The free-flow valve design allows for a very large flow rate despite a compact design.

4 Flow rate

1 = natural gas ($\rho = 0.80 \text{ kg/m}^3$)

2 = town gas ($\rho = 0.58 \text{ kg/m}^3$)

3 = propane ($\rho = 2.01 \text{ kg/m}^3$)

4 = air ($\rho = 1.29 \text{ kg/m}^3$)

Reading instructions

When determining the pressure loss, operating cubic metres must be entered. Then the pressure loss Δp read must be multiplied by the absolute pressure in bar (positive pressure + 1) to account for the change in the medium's density.

Example

inlet pressure p_u (positive pressure) = 4 bar,

gas type: natural gas,

operating flow rate $Q_b = 350 \text{ m}^3/\text{h}$,

selected in the diagram: JS4V 50,

Δp from diagram = 5 mbar,

$\Delta p = 5 \text{ mbar} \times (1 + 4) = 25 \text{ mbar}$ on JS4V 50

Trip pressure	Z	Z	Z

5.3 ProFi

A web app selecting the correct product is available at www.adlatus.org.

5.4 Type code

5.4.1 JSAV

JSAV	Safety shut-off valve
25-100	Nominal size
R	Rp internal thread
F	Flange to ISO 7005
40	p _u max. 4 bar
50	p _u max. 5 bar
/1	Over-pressure shut-off p _{do}
/2	Over-pressure and under-pressure shut-off p _{do} /p _{du}
-0	No pressure test point
-3	Screw plug at the inlet and outlet
Z	Special adjusting range

5.4.2 JSAV..T

JSAV	Safety shut-off valve
25-100	Nominal size
T	T-product
A	ANSI flange
N	NPT internal thread
40	p _u max. 60 psig (4 bar)
50	p _u max. 70 psig (5 bar)
/1	Over-pressure shut-off p _{do}
-0	No pressure test point
-3	Screw plug at the inlet and outlet
Z	Special adjusting range

6 Project planning information

6.1 Installation

If the controls downstream of the gas pressure regulator are not resistant to the supply pressure, EN 746-2 prescribes a safety shut-off valve upstream and a safety relief valve downstream of the gas pressure regulator – regardless of how high the inlet pressure is.

Ensure that there is sufficient tube length for the impulse line.

Installation in the vertical or horizontal position, never upside down.

Install the unit free of mechanical stress and so that it is not in contact with masonry (min. clearance 20 mm (0.79")).

Ensure that there is sufficient space for installation, adjustment and maintenance work.

Sealing material and thread cuttings must not be allowed to get into the valve housing. Install a filter upstream of every system.

Do not store or install the unit in the open air.

A breather line must be connected to the measuring unit to maintain the function of the JSAV.

7 Accessories

7.1 Reset lever

Reset lever to reset JSAV 50 – 100:

Order No.: 03151140.

7.2 Position switch for remote indication

The position switch can be used for electronic position checks.

Order No.: 03151185.

8 Technical data

Gas type: natural gas, town gas, LPG (gaseous), biogas (max. 0.02 %-by-vol. H_2S) and air. The gas must be dry in all temperature conditions and must not contain condensate.

Max. inlet pressure p_{U} :

JSAV 25 – 40: 4 bar (58 psig),

JSAV 50 – 100: 5 bar (72.5 psig).

Max. test pressure for testing the JSAV:

inlet and outlet temporarily < 15 min.:

JSAV 25 – 40: 6 bar (87 psig),

JSAV 50 – 100: 7.5 bar (109 psig),

JSAV 25 – 100 impulse line temporarily < 15 min.:

750 mbar (10.8 psig).

Trip pressures $p_{\text{dO}}/p_{\text{dU}}$ preset at the factory:

upper trip pressure p_{dO} : 120 mbar (48.2 "WC),

JSAV 25 – 40: lower trip pressure p_{dU} : 10 mbar (3.9 "WC).

Trip pressure ranges, see spring table.

Accuracy group: AG 10.

Ambient temperature: -15 to +60°C (5 to 140°F).

No condensation permitted.

Long-term use in the upper ambient temperature range accelerates the ageing of the elastomer materials and reduces the service life (please contact manufacturer).

Storage temperature: -15 to +40°C (5 to 104°F).

Connection for housing:

JSAV..R: Rp internal thread to ISO 7-1,

JSAV..N: NPT internal thread,

JSAV..F: PN 16 flange to ISO 7005,

JSAV..A: ANSI flange.

Connection for impulse line:

JSAV 25 – 40: DN 8 (1/8 NPT) (Ermeto coupling installed).

Connection for impulse and breather lines:

JSAV 50 – 100: DN Rp 1/4 (1/4 NPT).

Housing:

JSAV 25 – 40: AISi,

JSAV 50 – 100: GGG 40.

Diaphragm: NBR.

Valve seat: aluminium.

Valve stem: stainless steel.

Valve disc:

JSAV 25 – 40: steel with vulcanized NBR seal,

JSAV 50 – 100: aluminium with vulcanized NBR seal.

8.1 Dimensions

8.1.1 JSAV 25 – 40

With Rp internal thread or with ISO flange
